

Practice Task 3

1. Import the Students.csv file into two tables using a new database in Access. Import all of the students' information into the Student Table and All of the billing information into a Billing table creating a one-to-one relationship.
2. Add an OLE object in the correct format to the first five students.
3. Create a Table call Courses and put at least five different courses in the table.
4. Create a table to put many students taking many classes. Call this table Junction.
5. Create a report showing what students are in what classes. Group this report by courses.
6. Create a form showing students and a sub-form of what classes they are taking.
